SUMMARY:

Capitol Metal Finishing, Inc. began operations at this site in 1980. The company was formed by a merger between Austin Painting & Plating and CMF. Conducted on-site were aluminum anodizing and electroplating for zinc, cadmium, nickel and cyanide plating, and various other types of specialty metal plating. The contaminants of concern include those heavy metals mentioned plus cyanide and 1,1,1-trichloroethane.

There are no drinking water wells known to exist within 1 mile of the site. There are also no perennial surface water bodies within 1 mile of the site. Based on the preliminary information, the threat to drinking water seems limited. We will look forward to the Screening Site Inspection for more detailed information.
